

FlowPay

Live on Avalanche Fuji · 2026-10-16

Scan. Pay. Instantly.

The problem.

Tourists

arrive with crypto they can't spend

Merchants

only accept local cash — pesos, rupiah, peso

Today’s fix

bad kiosks, custodial apps that leak identity, or physical cash

USDC in. Pesos out.

Scan a local payment prompt. Pay in USDC. The merchant receives their local currency. Fully onchain. Fully anonymous.

Three routes, one fallback.

01

P2P LP

Local liquidity provider delivers pesos. Stakes USDC — slashed if they fail.

02

Licensed offramp

Fallback to whitelisted licensed partner. Pesos in <30 s.

03

Pesos float

FlowPay's own float covers it. LP slashed in parallel.

How it works.

1. Tourist taps **Scan & Pay**, enters the bill amount.
2. Server signs an EIP-712 Quote. Tourist's smart-wallet calls `pay()`.
3. FlowSettlement emits `OrderCreated`. Chain watcher reconciles at 1 Hz.
4. Engine races the three routes, settles onchain, pesos delivered.

What’s live.

5 contracts on Fuji

FlowSettlement · TreasuryVault · LPRegistry · TripAccountFactory · MockUSDC

27 Foundry tests

100% green. EIP-1167 clones via CREATE2. On-chain spend caps.

Gasless onboarding

Server deploys account + mints 10 USDC in 6 s. User signs zero gas.

Mobile-first webapp

Next 15, wagmi 2, viem 2. Scan&Pay keypad, live Snowtrace links.

Why Avalanche.

Fast finality

Sub-second confirmation keeps settle windows tight.

Cheap gas

Full onboard + payment under ¢1 on testnet. Mainnet sub-cent.

Native USDC

Circle USDC available on Avalanche today. MockUSDC for demo.

Try it.
